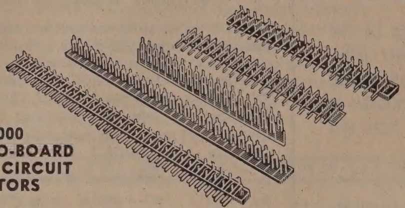
PRINTED CIRCUIT CONNECTORS



SERIES 5000 BOARD-TO-BOARD PRINTED CIRCUIT CONNECTORS

Employ same "Varicon Reliability Principle" as conventional Varicons fork-like contact, four coined mating surfaces. Supplied in disposable plastic strips at .200″ spacing. One to 60 contacts to a strip. Staking of the contacts to the printed circuit board is made in accordance with modern mass-production techniques with special staking tools. Tools are available from ELCO either unmounted, for application to customer die set, or completely mounted in ELCO die set, as desired. Staking of contacts to the printed circuit board, and thereby to the printed circuit line assures a solid, low resistance contact, rigidly held in place. Dip soldering the board automatically makes an additional connection between contact and board thus creating an unsurpassed reliability for the joint. Over 65 pounds are required to tear a contact from the board if staked and soldered, 50 pounds if staked only, and 25 pounds if only soldered. For small-size modules brackets can be supplied separately. It is recommended that larger modules be guided by integral parts of the equipment. Contacts: Phosphor bronze. Finish: Gold flash over nickel plate. Contact Resistance: .002 ohm max. Insertion and withdrawal. Force: 8 oz. per contact, average. Contact Life: Unchanged after 5000 insertions and withdrawals.

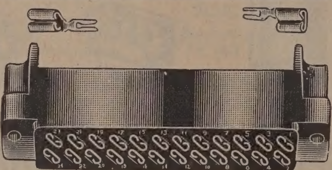
SERIES 7009 VARITWIN-PIN* PRINTED CIRCUIT CONNECTORS



Female Connector Body: Constructed of one-piece molding. Insulator material is Diallyl Phthalate per MIL-M-18794-SDG. Guides integrally molded with the connector body insure perfect mating of the printed circuit module card with the connector. Mounting of connector accomplished by two .128″ diameter mounting holes, one at either end of the connector. Width of connector is .580″; permits mounting of adjacent connectors on .600″ centers. Contact configuration: Two rows of contacts on .200″ spacing, with .125″ between rows; one row offset .100″ from the other, allowing .100″ spacing of contacts on the module card. Varitwin-Pin Contacts have bifurcated terminations and each will accept two Series 53 taper pins. Terminal end of the contact with its dual positions, lies on a 53° angle with respect to the connector axis, and is recessed 95% into the connector body. Module card is 1/16″ thick. Polarization accomplished simply by insertion of a polyethylene polarization tab; no loss of contact position is incurred. Male Connector: Printed Circuit module card is punched or drilled and ELCO contacts staked and soldered in, forming the male part of the connector. Hole pattern for the ELCO printed circuit contact lies on a .100″ grid, and should be held to plus or minus .003″ tolerance, non-accumulative, for hole location. Hole diameter is .052″, .000″, –.004″. Current Rating: 10 amps. Contact Resistance (at rated current): 0.003 ohm, max. Contact Material and Plating: Phosphor bronze (per QQ-P-330 Grade "A"), nickel plate (0.0002″), gold flash (0.000010″ to 0.000015″). Military Specification: MIL-E-19600A (WEP).

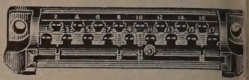
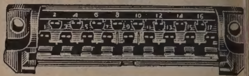
SERIES 7001 AND 7008 CONNECTORS



7001



7008

Subminiature Printed Circuit Varicon Connector with contacts arranged in two tiers. Lower tier has one contact more than upper tier. Contacts are located on .100″ centers. Male member of connector consists of contacts supplied on plastic strips. Contacts are then placed into pre-punched o drilled holes in module board and stake directly into P-C card. Plastic is then removed with ELCO Heat Platen. Female portion of connector is a Diallyl-Phthalate insulator housing the contacts with which the module board is mated. Connector is designed for 1/16″ thick P-C board with molded guides for properly mating the contacts. Sizes available for 17, 23, 29, 35, 41 and 47 contact units. 7001 and 7008 Series connectors differ in two basic respects: (1) The module card of the 7008 is .100″ wider (.050″ on each side); and .050″ longer (added to the connector end of the card). (2) Polarization: On the 7001 Series, a tabular metal pin is used for polarization at odd contact numbers, i.e., 3, 5, 7, etc. Use of the first and last positions for polarization is not recommended. Pins are factory assembled. On the 7008 series, a polyethylene insert is inserted into the card slot at even contact numbers, i.e., 2, 4, 6, etc. These can be factory assembled, or furnished loose for your own inserting. Current Rating: 7 amps. Contact Resistance: .005 ohm, max. Contact Material: Phosphor bronze, nickel plated and gold flashed. Military Specification: MIL-E-19600A (WEP) para 3.5.5.

AN ELCO EXCLUSIVE! E-Z MATE SOCKETS

ELCO'S E-Z Mate Socket design saves time, tubes, tempers via an ingenious positioning key at top of socket which permits tube to "find" insertion point almost automatically. Hence, tubes may be inserted in "blind" or formerly inaccessible locations. All 7- and 9-pin base-shield and saddle type sockets (except ceramic) will be delivered in E-Z mate design AT NO EXTRA COST when available. If E-Z Mate specifically desired, add notation when ordering. Conforms to MIL 12883-A.

NEW LOWERED SOCKET PRICES

ELCO Sockets are now available at prices considerably less than before—with absolutely no lowering of our famous quality standards. These lowered prices are made possible by our new, larger manufacturing plants and the resultant production economies. We are happy to pass these dollar savings on to you.

NEW! MICRO-GATOR CLIP

(Smallest Insulated Clip Ever Made)

U.S. Patent No. 2,762,028   Trademark Reg.

Micro-Gator

Micro-Gator with Insulator

The alligator clip with the microscopic tip! This is the alligator clip you now can use where no other clip will do . . . on printed circuits, in tight spots and on tiny terminals too crowded for anything but its microscopic tip. It offers the speed, free-handed ease and convenience associated with other Mueller alligator clips. The Micro-gator is truly small (takes 30 to weigh an ounce!) Including separate skin-tight insulator the tip is no bigger than the head of a pin! Yet the Micro-gator has ample thumb grip, and plenty of bite to stand up straight on the smallest terminals. Ample 7/32″ jaw spread. Solder connection. Skin-tight flexible vinyl insulator (sold separately) has "lip-action" tip slot so that jaws stay covered whether open or closed.

MINI-GATOR CLIP

U.S. Patent No. 2,762,028   Trademark Reg.

Mini-gator

Mini-gator with Insulator

Indispensable for testing or incorporation into miniaturized equipment. Skin-tight flexible Vinyl insulator (sold separately) covers completely — has slotted "lip action" tip. Clip weighs 1/20th oz., has tiny 11/64″ O.D. nose, but ample 3/16″ jaw spread. Crimping ears. Solder connection. Surprisingly strong bite penetrates corrosion and coatings.

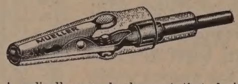
COMPLETELY INSULATED ALLIGATOR CLIPS



Patent Pending

No. 63 or 63-C Clip

Sold only as a unit, with factory-applied insulators.

A radically new development that doubles the usefulness of Alligator Clips! Completely insulated right down to the nose. Flexible 2-piece skin-type vinyl insulator of high dielectric strength, with "lip action" slotted nose that permits opening of clip without exposing metal. Insulator nose is only 15/64″ O.D. The tight fitting sheath preserves all the slimness of the Alligator Clip, still giving complete protection against shorts in even the tightest spots. These clips could be bunched together—touching all around—without danger of shorting. Screw connection easily made by slipping insulator forward.

No. 63—INSULATED ALLIGATOR CLIP (STEEL)

Composed of Mueller No. 60-S Alligator Clip steel, cadmium plated, screw connection, complete with 2-piece vinyl insulator. Shipped half with red insulators, half black. 10 per box.

No. 85-T—Crocodile "Tip-Clip"—equipped with standard phone tip on one jaw, otherwise same as No. 85. Ideal for use as a prod, for ordinary clip connections and for connections to insulated binding posts having non-removable heads. 2⅝″ long. 10 per box.

EACH NET..........................$0.22   LOTS OF 10..........................$0.15

Use No. 87 Insulators for clips 85, 85-C and 85-T. Red and Black. Cover entire clip except nose. Protect against short and shock. Help to distinguish leads.

CONNECTORS

UHF • BNC

These units are satisfactory at frequencies ranging from 200 to 500 megacycles but are not constant impedance connectors. They may be used at peak voltages up to 500 volts and some special units at 5000 volts. These are not weatherproof connectors except in the case of the MX-913/U cap and chain.

Adapters are available for use with other coaxial series such as the "N" and "BNC." We have available several high voltage applications which apply on the SO-239 receptacle and on the PL-259, PL-259A plugs. These units eliminate and replace the large cable connectors which formerly were needed for voltages up to 5000 volts. At the same time there are also many plate variations and modifications of the SO-239 receptacle. The PL-259 and PL-259A adapters are also available with different cable openings which eliminate reducing adapters and other accessories.

These fittings are small, lightweight, weatherproof, quick connect and disconnect connectors. They are designed for use with small R.F. cables, such as RG-55/U, RG-58/U, RG-58A/U, RG-59/U, RG-62/U and RG-71/U, and may be used for application where the peak voltage does not exceed 500 volts.

The BNC connectors are constant impedance, 50 ohm connectors, yielding an excellent electrical performance up to 10,000 mcs. There has been great usage of these units for aircraft test equipment. Adapters are also available between the BNC and other coaxial connector series. We can offer many modifications of these standard types in accordance with a specified requirement. These connectors are manufactured in strict conformance with Military Specification MIL-C-3608.

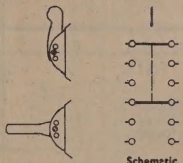
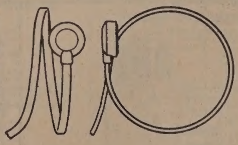
MINIATURE SWITCHES: for low voltage applications. These switches are subjected to the most stringent mechanical and metallurgical inspections and can be employed with full confidence on the widest range of electrical equipment.



Schematic

EARPHONES: quality magnetic transducers in flesh or grey; power, frequency or sensitivity to fit the application. Standard U.S. polarized-type cord connection. Impedances from 3.2 to 8000 ohms.

CONTACT THROAT MICROPHONES/HEART BEAT MICROPHONES: effective for use in surroundings with high background sound levels because only the operator's voice is registered. Microphone diaphragm is held in place by a light steel band covered by soft plastic. Impedances: 50, 120, 200 and 500 ohms. In grey only.



language lab headsets

To meet the growing demands of this active field, Rye Sound has prepared a complete line of aircrew headsets, microphone insets, boom-arm microphones, noise-cancellation mikes in divers combinations. These headsets are of the finest quality, offer maximum intelligibility, wearing ease, operating freedom and flexibility.

TEFLON TERMINALS

SMITH TEFLON Terminals are designed for use as precision components in critical electronic applications such as Computers • Microwave • UHF-VHF • Missiles • Satellites

Y: Pure virgin Teflon, meeting all requirements of MIL-P-19468 and AMS Specification 3651B.

MINALS: Precision machined of brass, meeting specification QQ-B-626, Composition 22, and gold-plated for maximum solderability and resistance to corrosion and tarnish.

CRIPTION: Terminals are easily inserted into punched or drilled holes, and are self-locking.

— Miniature and sub-miniature sizes allow for maximum space utilization.

— Excellent resistance to thermal and mechanical shock, vibration, corrosive atmospheres, moisture absorption.

— Exceptionally high dielectric strength for use well up into Kilovolt region, depending on size and design.

COLOR CODE SUFFIX (add to catalog number as required).

— 101 WHITE*	— 104 GREEN	— 107 YELLOW	— 112 PURPLE
— 102 RED	— 105 BLUE	— 108 BROWN	— 113 GREY
— 103 BLACK	— 106 ORANGE		

*White is natural Teflon, and will be supplied if no color is specified. Coloring does not affect electrical, mechanical, thermal or physical characteristics of Teflon.

INSTALLATION PROCEDURE

1. For chassis or panels ⅛" (.125") or less in thickness, punch or drill hole .013" ±.002" LESS than the diameter of the bushing (dimension "A" in the tables). Minimum protrusion of assembled terminal should be .040" (dimension "B" less chassis thickness) for greater holding power. Recommendations for panels greater than .125" thick are available on request.
2. Countersink the insertion side of the chassis. For chassis thicker than .040" use 60° countersink. For chassis less than .040" thick use 90° countersink. Countersink depth should be such that "Maj. Dia." shown in drawing is equal to bushing diameter (Dimension "A") of the terminal.
3. Insert terminal in countersunk side of chassis, and press until shoulder of terminal seats against chassis.

"SNAP ACTING" MOMENTARY CONTACT SWITCHES

PRECISION SNAP-ACTING SWITCH A precision snap-acting switch is a mechanically operated electric switch having predetermined and accurately controlled characteristics, and having contacts other than the blade and jaw, or mercury type, where the maximum separation between any butting contacts is 1/8 inch.

MOMENTARY CONTACT SWITCH — A momentary contact switch is a switch which returns from the operated condition to its normal circuit condition when the actuating force is removed.

ACTUATOR An actuator is the mechanism of the switch or enclosure which, when moved as intended, will operate the contacts.

OPERATING FORCE Operating force is that straight line force in the designated direction applied to the actuator to cause the switch contacts to snap to the operated contact position.

PRETRAVEL Pretravel is the distance or angle through which the actuator moves from the actuator free position to the actuator operating position

OVERTRAVEL Overtravel is the movement of the actuator beyond the operating position.

MOVEMENT DIFFERENTIAL — Movement differential is the distance or angle from the operating position to the releasing position.

ROCKER-ACTUATED TOGGLE SWITCHES

Combines advantages of Toggle Switch circuitry and current capacity with pushbutton control. Snag-proof keys prevent false actuation. Translucent plastic keys feature edge light indication. Lower half of key emits soft glow from light source in panel. Enables easy identification of actuator position. Transparent plastic keys mounted above flush. An insert with signs, symbols, or letters can be placed under the key.

Temperature range −65°F to +160°F. Sealed between bushing and rocker actuator, and between cover and case. **Std. Pkg. 10**

TEFLON* SPAGHETTI TUBING

tubing is ideal for slip-on insulation in electricial and electronics applications. Its exceptional insulating ties provide greater reliability and resistance to high temperatures. Due to its resistance to soldering ratures, shrink-back during soldering is virtually eliminated.

Teflon tubing is available in most AWG sizes from #30 to #0, in three basic wall thicknesses; Standard to .020"), Thin Wall (.009 to .015"), and Lightweight (.006 to .012"). Specific wall thickness for various izes is detailed in the table. All sizes are available in Natural Teflon, and any of 10 colors as indicated in olor Code chart.

Teflon Spaghetti Tubing meets or exceeds the requirements of MIL-I-22129B, and colors conform to TD-104. Standard and Thin-Wall tubing in sizes AWG #30 to #8, and Lightweight tubing in sizes AWG #28) are supplied in 100-foot dustproof, re-useable reels, polyethylene covered and closed with a special hylene plug. Sizes to AWG #0 are carefully packaged in 50 foot coils to prevent distortion of the tubing.

AUDIO JACK PANELS

Extensively used in the broadcast field, on instrumentation systems, communication networks, etc. Listed below are the most common of a large variety of standard types. Jacks as ordinarily supplied (mounted on panels) have offset ground lugs, which considerably reduces wiring cost of installation. Straight ground lugs (duplicating W.E. jacks) available. Types 96-71 and 96-72 used with tip, ring, and sleeve plugs (No. 516 and No. 517); others usually used with twin plugs (No. 506) but will fit standard two-circuit plugs.

SYNCHRONOUS MOTORS AND TIMERS

Versatility is the characteristic which design engineers need — and find — in Bristol Synchronous Motors and Timing Devices. Bristol's unusually broad experience and range of design and manufacturing skills are particularly valuable where special requirements must be met.

The devices shown are among the most widely used. All can be mounted in any position, and take a minimum of space. Materials are selected on the basis of their suitability to provide long service, and perform well under a variety of conditions.

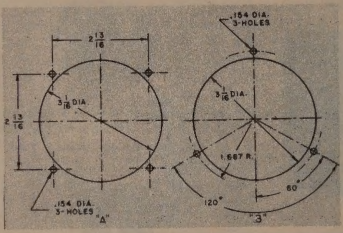
Bristol engineering service is available for applications that require custom design and manufacture.

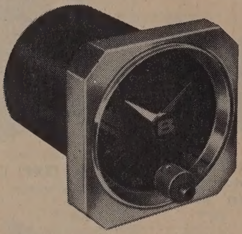
Series 6100 Time Delay Relay. Universal Time Delay Relay provides self-holding solenoid starting with adjustable timed contact operation. Type 6110 provides three types of load contacts which give seven types of load circuit operation in a single unit. This model may be wired up to one of four basic types of operation: momentary start, automatic reset; momentary start, manual reset; sustained switching; and tandem or cascaded operation. Size: 3" in diameter by 5⅙ long. Timer case bezel ¹⁹⁄₃₂ thick x 3⅝ inches square. Universal mounting allows standard 3-stud or 4-stud panel mounting. 115 VAC — Price $44.00 each.

TWO TYPES OF FRAMES WITH INTERCHANGEABLE DIAL FACES PROVIDE 4 COMBINATIONS! (See 6200 Series)

Full Scale Available from 6 Sec. to 24 Hours
Interchangable Mounting

The 6100 series timers are provided with removable threaded studs. Timers are normally mounted with four studs, Figure A. Threaded holes are provided for alternate three-hole mounting, Figure B.





6200 Time Delay Relay. Companion to the 6100 series timers. This model is operated by a manual push button start on the face of the timer and provides unusual circuit versatility. This unit times out to the zero position and remains timed out until started by the manual push button. This timer does not reset on power failure. Size, 3 inches in diameter x 3¼ long. Intended for lower cost variable delay timer operations. 115 VAC — Price $27.00 each.

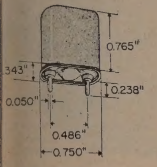
Made to order crystals in pressure type holders can be supplied in five types as shown. All TEXAS CRYSTALS are cut, lapped, and etched to exact frequencies. They are supplied for oscillator circuits having 32 MMFD capacity, unless otherwise ordered, as the crystal frequency will vary with capacity of the circuit.

Low frequency crystals from 1001 KC to 2100 KC are space mounted—all others are pressure mounted. The advantage of the pressure mount crystal is its ability to handle more current (up to 50 Milliwatts) without fracture. Order by frequency, type holder, tolerance, and circuit capacity (if known) or type of equipment in which it is to be used.

HERMETICALLY SEALED CRYSTALS MADE TO ORDER



HC 6/U .050 PINS

In recent years, manufacturers have engineered new equipment utilizing the hermetically sealed plated crystal (HC6/U). This crystal is either gold or silver plated, the plating acting as electrodes. These crystals should be used in circuits designed for them as the maximum current capacity is 10 milliwatts (5 milliwatts for overtone type). High stability of frequency is a characteristic of this crystal. All TEXAS CRYSTALS are made to conform with military specifications. When ordering for G. E., Motorola, Link, etc., for split channel operation, a sample of both transmitting and receiving crystals known to be correct, be sent us with order specifying exact crystal frequency desired. We will correlate crystals and return your samples. Type HC6/U has .050 pins and fits CE-1 socket. Type HC17/U is the same physical size except the pins are .093 diameter. Specify type circuit, if known. Order by fundamental frequency, type circuit, type holder. All plated crystals are .005% tolerance.

"NEW" COMPLETE WIRE MEASURING OUTFIT

ACCURATE • COMPACT • NOISELESS

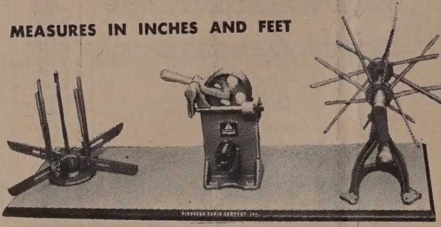
MEASURING MACHINE

Sturdy and compact construction. Has a precision quality built counter with large numbers for easy reading and will register wire up to .9,999 feet for direct accurate reading. Can be easily reset to zero position.

Wire passes through two rollers, the upper roller being self-adjusting and the tension of the upper roller can be set by a thumb screw to provide the proper grip for very fine as well as for heavy wire.

Two hardened lead bushings with an opening of ⅝″ diameter will guide the wire properly through the rollers. Bushings are removable to allow cables up to 1″ dia. to pass through. Will measure accurately all electric wires, cables, coaxial cables, rope, tape, etc.

MEASURES IN INCHES AND FEET



Sold without baseboard.

WIRE WINDER

Has adjustable arms to be set to the desired coil size and the arms will open to a flat position for easy removal of the coil. Simply open thumb screw which holds the front collar tight on the shaft, push the collar in any direction to the desired position and tighten the thumb screw again.

HOLDING REEL

Compact, adjustable to size of coil and folding. Will hold spools or coils o wire.

Birnbach SUB-MINIATURE TEFLON TERMINALS

BIRNBACH

NEW SUB-MINIATURE TELFLON* terminals provide instant mounting without any extra hardware of any kind because of the exceptional properties of Virgin Teflon*.

Low dielectric constant, low power factor (60 cps to 30,000 mc), low capacitance, high volume, high surface resistivity, high dielectric strength (1500-2000 v/mil, s.t.), continuous service—450°F to plus 500°F, unaffected by soldering, chemically inert, damage resistant, water repellant, voltage rating, sea level 750v r.m.s., flash-over, sea level 3000v r.m.s., flash-over, 50,000 ft. 1300 v r.m.s.

Installed permanently in seconds, in metallic or non-metallic chassis in one, simple, corking motion into punched or drilled holes. Mounting Hole Data: 1. Punch or drill the hole to a diameter that is .012″ less than the diameter of the Teflon insulator which passes thru the chassis. 2. Where the thickness of the chassis permits, the entrance edge of the mounting hole should be countersunk 30° to the diameter of the insulator. Where chassis thickness will not permit (.040″ or smaller), countersink 45° to the diameter of the insulator.

Speeds up assembly—cut production costs, no nuts, washers, staking or soldering necessary especially adapted in crowded assemblies.

As for HF, VHF, UHF, microwave, radar, telemetering, guided missile instrumentation and circuitry.

ALL-NYLON FASTENINGS

Zytel 101 per Mil P 20693 Spec, Mil S 7742 Spec

Birnbach All-Nylon Fastenings are made of Zytel 101*, a Polymide plastic of the Nylon 6.6 Type. They offer outstanding insulating properties plus resistance to heat, shock, vibration and chemical solvents plus lightness elasticity and superior torque strength. In most cases, because of their high dielectric strength, they eliminate the need of bushings, washers or other insulation. They are corrosion resistant, non-magnetic and good torque strength thru a wide temperature range. Continuous service temperature to 300°F (150°C). Stock color: Natural. Additional colors available to order. Zytel 101 per MIL-P-17019B.

#3801 ARBOR SWAGERS (FIG. A)

ecially designed by Cambion for mounting Cambion terminals on terminal ards. These Arbor Swagers are sturdy, precision-built, hand operated, cam tion rolling tools; designed for quick, solid uniform swaging of solder terminals. Adjustable to a wide range of terminal board thicknesses by setting the vil at the proper height. Terminals may be swaged, in place, as far as 1⅞″ m the board edge. Pressure is adjustable and uniform, assuring good, even ening. When ordering, specify terminal to be staked. PSA (anvil) d PSP (punch) toolings are used with the Arbor Swager, Net Each.... **$40.00**
A and PSP tooling, each $4.00.

BARRIER TERMINAL BLOCKS

e Jones Barrier Terminal Block is another product of Cinch designed offer increased insurance against failure of electrical/electronic cuitry. By interposing barriers between each adjacent terminal posi- n, not only are much higher voltage ratings obtained, but also additional protection from frayed wire faults is gained. The block is made of molded bakelite. The eyelets and binder screws are of brass, nickel-plated. The ¾W or Y terminals are of brass, hot tin finish. **Widths indicated are measured on the barrier between terminals.**

RATIO DRIVES

for FINE INSTRUMENT AND MACHINE CONTROLS

Ball Bearing Type **Compact, durable, exceptionally smooth action**

These unique ratio drives employ precision ball bearings. Used for rotary control of components in instruments, they provide unexcelled smooth motion. Ruggedly built, permanently sealed and lubricated, JAN Ratio Drives accommodate applications where miniaturization is essential.

Input and output shafts of these units operate in the SAME DIRECTION. Types "RDL" and "RDS" provide "in-line" input-output shafts. Type "RDLC" is supplied with **concentric** shafts whereby the output envelopes the input shaft. An added feature of type RDLCC is the output shaft in the rear. The front concentric can be used as a coarse tuning (1:1 ratio to the output in the rear) and the small diameter shaft in the front can be used for fine tuning.

RIGHT ANGLE RATIO DRIVES

Versatile, miniaturized, right angle rotary controls.

Featuring dual output stainless steel shafts at right angles to input, these engineered drives provide an ideal type of instrument control. Available with matched bevel or worm gears covering a wide range of ratios.

JAN'S RIGHT ANGLE DRIVES are especially useful for handling spring or gravity-loaded components since the output shaft automatically locks in any desired position yet remains free for smooth adjustment by the input shaft. Assembled in dust-proof housings, the gears are permanently pinned in place on stainless-steel shafts mounted in oilite bearings and held under constant pressure.

SLIP-CLUTCH, SAFETY KNOBS
With Fixed or Retractable Spinners

Cat. Nos. K-1375 & K-1376 (For ¼" shafts)

Designed for driving devices such as variable capacitors, inductors, potentiometers, etc., these knobs are based upon the principle of the "slip-clutch", automatically disengaging and slipping when a pre-determined torque has been exceeded. JAN'S SLIP-CLUTCH SAFETY KNOBS are fluted to aid in sensitive adjustments and are equipped with either a fixed or retractable spinner for fast turning. Insert-molded-to-Bakelite construction provide durable, backlash-free units to safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops.

Model No. K-1376 is identical with No. K-1375 but has the additional feature of a retractable spinner. Spring loading provides positive, toggle-type action to lock spinner in either open or closed position. Model No. K-1376 is designed for use where economy of space is essential.

Model No. K-1475 Slip-Clutch knobs are designed similar to No. K-1375 except for larger dimensions and utilize cast aluminum in place of Bakelite.

JAN'S MAGNETIC SHIELDS are made of Mu-Metal and are hydrogen annealed by a special process to assure optimum orientation of the molecular structure of the alloy for best magnetic shielding. JAN'S MAGNETIC SHIELDS prevent distortion and intensity modulation of the electron beam due to stray magnetic fields. In addition, the use of these shields protect personnel against the dangers of accidental tube breakage. Mounting holes are tapped for No. 6-32 screws as shown. These shields are designed to fit JAN'S standard bezels as listed below. See following pages for specifications on JAN'S BEZEL ASSEMBLIES.

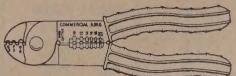
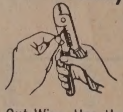
No. 1900 Crimping Tool

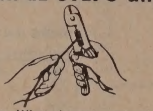


No solder . . . no iron . . . no heating . . . a perfect connection every time with this tool and Solderless Terminals by Vaco! Crimping tool has wire cutters, indenting die, wire-stripping die, shock-proof, slip-proof plastic handle sleeves. For No. 22 to No. 10 gauge wire. $3.95

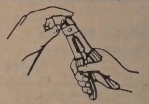
Only 3 SIMPLE STEPS and Terminal Is On



1. Cut Wire. Use the wire cutter built into the crimping tool to cut wire proper length.



2. Strip Wire. Insert end of wire into proper wire stripping opening, close jaws, rotate tool one-half turn, then pull insulation off wire.



3. Crimp Terminal. Insert stripped portion of wire into terminal barrel, place barrel in proper crimping nest with seam directly opposite crimping tooth and close tool like pliers.

Extra long barrel on terminal provides easy crimp and perfect contact. Only ONE crimp necessary. Barrel always remains round.

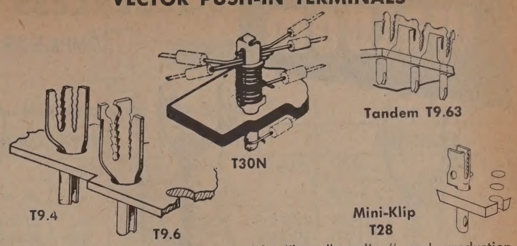
VECTOR PUSH-IN TERMINALS



VECTOR PUSH-IN TERMINALS simplify "breadboarding" and production. Push them into .062″ or .093″ holes in 1/16″ or 3/32″ Vectorbord panels and they hold without staking. (May be staked by clipping off flush with board surface or flattening with a pair of pliers for maximum holding, if desired). All terminals except T9.4A have serrated slots to grip inserted wires. Large slot accommodates most resistor and capacitor wires. Small slot hold transistor leads. The T9.4A is supplied without "teeth" on the wire slots to permit easy removal of leads when soldered components must be changed. The T9.6 has a special "snap-in" slot to accommodate .075-080 diode leads. All types have thru hole construction enabling riser wires to be inserted down through center of terminal, and slot or hole in shank for additional connections.

SOLDERLESS SPRINGCLIP TERMINALS—Reliable truly solderless terminals for fast setup of experimental circuitry. May be used over and over—permits reusing expensive components by eliminating heat damage. Extremely low contact resistance—less than .002 ohms for T30. Order insertion tool P-92A for easy insertion in .093″ holes. Suggested board thickness 3/32″ for best support of terminal.

VIBRATING REED FREQUENCY & TIMING INSTRUMENTS

GENERAL DESCRIPTION

Vibrating Reed Instruments are direct reading frequency indicators for use where the efficient operation of A.C. equipment depends upon the maintenance of known or constant frequency. They are self contained, their accuracy is not affected by wide voltage variations or wave form distortions and require no auxiliary apparatus. They consist of a number of steel reeds, of high Q, each of which is tuned to a single frequency within the band covered by the instrument. Indication is by visual pattern formed by the vibration of the reed in resonance with the line frequency. Excitation is electromagnetic, and the reeds are the only moving elements. **Running Time Meters** are synchronous motor operated instruments to automatically measure service periods or service requirements.

New "Stethotracer" Signal Tracer

Amplifies 1000 Times! Locates Defective Circuits Fast!

Now trace hum, oscillations, ground loops, breaks in printed circuits and other common trouble shooting ailments in seconds! The dependable vest-pocket STETHOTRACER **detects and demodulates** any low level microwatt audio or modulated radio frequency signal . . . the signal is then amplified 1000 times into a high quality earphone, or observed on a scope, using a plug-in scope adaptor (available optionally).

Ideal for test and trouble shooting all types of radio, amplifiers, phonographs, magnetic tape recorders, dictating machines, hearing aids, and phono pickup cartridges, or for use as a preamplifier.

Complete with earphone, cord, 3 interchangeable attenuator probes and RF detector-demodulator crystal diode probe, ground clip lead and battery.

SPECIFICATIONS:

AMPLIFICATION: 1000X approx. at 1kc (600 ohm load).

LOW FREQUENCY BANDWIDTH: Useable from 60cps to 100kc.

MODULATED HIGH FREQUENCY BANDWIDTH: 100kc — 200mc (with 1kc audio modulation) — microwave frequencies with special probes.

INPUT IMPEDANCE: 3,500 ohm at 0 attenuation
35,000 ohm at 20 db attenuation
350,000 ohm at 40 db attenuation

MAXIMUM AC SIGNAL INPUT VOLTAGE: One millivolt peak-to-peak for linear operation across 600 ohm scope adaptor load (0 attenuation).

MAXIMUM INPUT DC VOLTAGE: 250V DC max. from the input terminal to case ground.

OUTPUT VOLTAGE: 0.3 volts peak-to-peak across 600 ohm scope adaptor load (linear operation).

OUTPUT ACOUSTICAL LIMITING: The output sound is limited electrically to the earpiece at 2 milliwatt level so that audio output is limited to a comfortable and safe level.

EQUIVALENT INPUT NOISE LEVEL: 3 microvolt peak-to-peak broad band with input shorted.

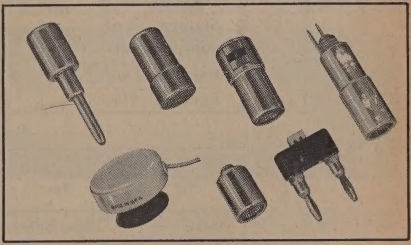
DISTORTION: 5% max. harmonic distortion within its dynamic range.

POWER SOURCE: 1.5 volt standard A. A. A. size battery (EVEREADY #912 or equivalent). Battery life: 250 hrs. normal use.

PROBES: 0db, 20db, 40db, attenuator probes, and RF crystal diode probe included.

OSCILLOSCOPE PREAMPLIFIER ADAPTOR: (Optional) equivalent of 600 ohms impedance with a DC level of +0.80 volt (use AC input on scope) output plug will fit all laboratory scopes with plug adaptor.

Accessory probes (available optionally) include Vibration Pickup Probe, Miniature Microphone Probe, Magnetic Tape Head Probe, Microwave Demodulator Probe and Telephone Pickup, Input Adaptor, Scope or Output Adaptor.



"Mosquito" Signal Generator

For Every Troubleshooting Application!

Find defective circuits quickly and exactly with the new MOSQUITO — a pocket-size, cordless, pen-size instrument which generates and injects a rich signal covering the audio, IF and RF spectrum!

The unique MOSQUITO contains a transistor oscillator, powered by a single 1.5 volt pen light cell, which completely eliminates, in many cases, the need for a large, expensive signal generator. It can be coupled into magnetic pickups and circuits **without leads** . . . oscillates at approximately 1,000 cycles per second, with a wave form rich in harmonics.

Ideal for use in radio, television, tape recorders, movie projectors, telephone circuits, sound systems, hearing aids, amplifiers, transformers, reproducers, transducers.

SPECIFICATIONS:

FREQUENCY: 1kc approximately with harmonics to 30 MC

OUTPUT VOLTAGE: 50 volts peak-to-peak approximately open circuit

OUTPUT IMPEDANCE: 10k capacitive

INPUT DC VOLTAGE: 600 volts max. from output tip to case ground

SUPPLY VOLTAGE: Use only one 1.5v conventional battery (EVEREADY #912 or any A. A. A. size equivalent).

BATTERY LIFE: 2,000 hours normal use

SIZE: 5⅝" long x ½" O. D. ONLY!

WEIGHT: ONE OUNCE!

Also manufacturers of "VIBROTRACER" pocket sized vibration detector.

DESCO* Circuitracer*

Circuitracer

GIVES YOU A 3-IN-1 ELECTRICAL TEST LABORATORY

LIST PRICE $4.95 Weighs only 2½ ozs.

Satisfaction Unconditionally Guaranteed

DON'T SEND A MAN TO DO A BOY'S JOB! Are the technicians in your laboratories and shops using expensive meters and instruments for sample continuity and voltage checks? Speed up production through the use of the tool specifically designed for this application. A meter should be used only when the value of voltage, resistance or current must be known. Under any other conditions a Circuitracer will provide the required information faster and easier than expensive, bulky meters.

CIRCUIT TESTING WITH A CIRCUITRACER IS FASTER because the signal light is in the tip at the point of contact. This makes it possible to determine the existence of a circuit or voltage without removing the eyes from the test point to read a meter.

SAVE METER REPAIR MONEY BY USING DESCO CIRCUITRACERS. An overvoltage across a meter usually results in extensive damage which takes the meter out of service until repaired or replaced. The worst that can happen to your Circuitracer is a burned out lamp that can be replaced by the operator in less than a minute. Total cost, ten or fifteen cents for the lamp!

The CIRCUITRACER is the only electrical tester (other than expensive meters) that can test dead circuits, low voltage live circuits AND high voltage live circuits. It is made of the finest materials available and is designed for long life.

INSURE CONNECTOR RELIABILITY

Manual probing of harness connectors while circuit testing can damage connectors and impair reliability. Desco Test Probe Adapters were developed to provide a test fitting identical to the pins and sockets in the connectors being tested. They make the same electrical and mechanical contact as the mating connector, and insure against scratching, bending and warping.

The adapters are made in three sizes to fit connectors using #12, #16 and #20 wire gauges. The sockets are gold plated copper with a brass sheath which retains a berylium copper spring. The pins are stainless steel to insure long life. All are made to rigid MIL-SPECS. The adapters will fit Desco Jumper Wires and the Desco Circuitracer* Tester interchangeably.

Several aircraft and missile manufacturers specify Desco Test Probe Adapters for most manual test connections. (names on request)

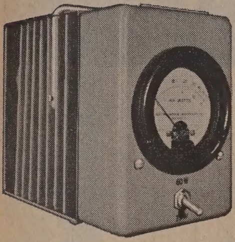
EMPHASIZING MAINTAINABILITY

1. Calibrate these Power Meters in your plant or laboratory against low frequency power standards at power line frequencies. No need to ship to manufacturer for repair and recalibration.
2. No correction curves necessary.
3. Simple operation.

200 KC TO 500 MC — GREATLY IMPROVED



Model PM-10

- **Portable, Continuous Duty.**
- **Can be recalibrated anywhere with DC or Alternating Current Power against a low frequency standard.**

These broad band R.F. Power Meters are of the absorption-type consisting of an oil filled, air cooled, coaxial load resistor and a voltmeter calibrated to read watts. The power meter is suitable for use as a field or laboratory test instrument, is completely shielded and non-radiating, permitting transmitter testing and adjustment without interference. The meter box is easily detached, permitting location of the load resistor at a remote point. In cases where power measurements are not required the load resistor may be used as a dummy load. No correction curve is necessary to cover the frequency range. The spurious response usually associated with directional couplers and capacitative voltage dividers is absent in this purely resistive voltage divider. Since this is a resistive voltage divider which has the same voltage division at DC, 60 cycle AC, and at high radio frequencies, this instrument can be calibrated and its calibration can be checked frequently on 60 cycle supply voltages.

100 KC TO 200 MC

- **Intermittent Duty.**
- **Portable.**
- **Can be recalibrated anywhere with DC or Alternating Current Power against a low frequency standard.**

These broad band R.F. Power Meters are of the absorption-type consisting of an oil or air filled, air cooled, coaxial load resistor and a voltmeter calibrated to read watts. The power meter is suitable for use as a field or laboratory test instrument, is completely shielded and non-radiating, permitting transmitter testing and adjustment without interference. It is designed to operate in the frequency range of 100 KC to 200 MC with an accuracy of plus or minus 5%. In this Power Meter a resistive voltage divider is used. This voltage divider has the same voltage divisions at DC, 60 cycle AC and throughout the frequency range up to 200 MC. Because of this feature it is possible to calibrate this Power Meter and its calibration can be checked frequently with DC power or with 60 cycle power. Since this is a resistive voltage divider, the spurious response usually associated with directional couplers in capacitative voltage dividers is eliminated.

NULL DETECTOR AMPLIFIER TYPE 1140-A

USES

A sensitive null indicator for bridge measurements, providing visual null indications or aural when used in conjunction with headphones. The unit may also be used as a high gain amplifier for general laboratory work.

DESCRIPTION

Functionally the instrument consists of a high gain linear amplifier with a 30 db. input attenuator in addition to the variable gain control. Resonant circuits tuned to 60, 400 and 1000 cycles limit the amplifier transmission characteristics to the three audio frequencies commonly used for bridge measurements or it may be used as a non-selective amplifier with filter "off." Other selective frequency can be obtained by use of a Type 1940 Filter Unit.

SPECIFICATIONS

Input Impedance: 1 megohm in parallel with 25 mmf. GAIN: 100 db. with 1 megohm load (6 mmf. shunt capacity).

Null Detector Sensitivity: At 1 kc, 10 microvolts will give a 15% meter deflection.

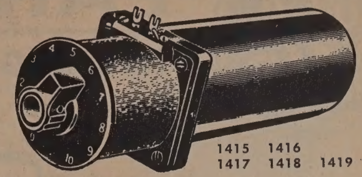
DECADE CAPACITORS



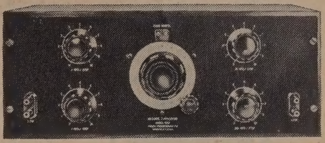
1415 1416
1417 1418 1419

The Freed series of Decade Capacitors covers a wide range of values and can be supplied as individual decades from 0.0001 mfd. per step to 1 mfd. per step or in various combinations of assembled decade boxes.

Single decade units can be assembled in different capacitor values for use in experimental and permanent equipment. The decade boxes are useful for laboratory work in bridge measurements and as components of filters and tuned circuits.

Polystyrene dielectric is used in the manufacture of the capacitor assemblies with the exception of the 1 mfd. per step unit which uses Mylar as a dielectric. All capacitors are non-inductively wound and heat treated for stability, low dielectric absorption and low losses.

Each decade is variable from 0 to 10 by use of 11 position selector switch. The losses in the switches and mountings are kept low by the use of special low loss, impregnated switch wafers. A positive detent mechanism allows the switch to be set accurately.



1350 Decade Capacitor

SPECIFICATIONS

Accuracy: Individual capacitors are adjusted to an accuracy of ±1% when measured at 1kc. The capacitance at the terminals, less the zero capacitance, is within ±1% of indicated dial setting. The zero capacitance of the decade boxes is supplied with each unit. Single decade units have a zero terminal capacity of approximately 8 mmfd. except Type 1419, which is compensated for true terminal capacity.

Dissipation Factor: The dissipation factor of the polystyrene units when measured at 1kc is less than 0.0002, the 1 mfd. per step decade (Mylar) is less than 0.005.

Maximum Voltage: The .maximum voltage that may be applied to these decades is 500 DC or peak.

Note: Individual capacitors can be supplied to better than ±1% Tolerance. Write for complete information.

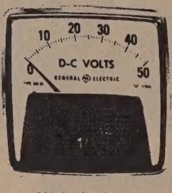
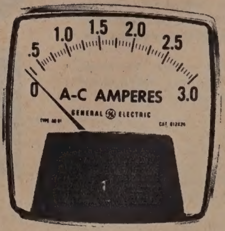
PANEL METERS

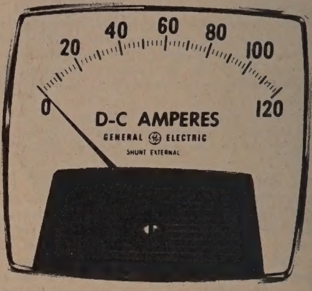
THE BIG LOOK IN SMALL PANEL METERS



2½-inch design
Type DW-91 Voltmeter



3½-inch design
Type AO-91 Ammeter



4½-inch design
Type DO-92 Ammeter

General Electric's BIG LOOK panel meters offer such added values as distinctive appearance, excellent readability, completely sealed cases and self-shielded d-c core-magnet mechanisms. And you get full-line selectivity with 2½-, 3½-, or 4½-inch models . . . a-c, d-c, or Rectifier types.

Distinctive Appearance

BIG LOOK panel meters are designed specifically to meet industry's increasing demands for panel components that contribute to end-product eye appeal. BIG LOOK panel meters—with their distinctive and modern, but not radical design—offer an important added value by complementing the appearance of the finest equipment.

Excellent Readability

Big, clear, easy-to-read numerals are positioned above the scale divisions so that they cannot be obscured by the pointer. The absence of arc-lines and use of a slim, tapered pointer facilitates quick accurate readings. Functional cover design eliminates confusing shadows by admitting natural light from all sides.

Completely Sealed Cases on 2½- and 3½-inch Designs

General Electric quality is built in to stay. Gasketed construction on 2½- and 3½-in. models protect internal parts from dirt, dust, and water and helps assure extra-long, reliable life.

Snap-on, Snap-off Covers on 4½-inch Designs

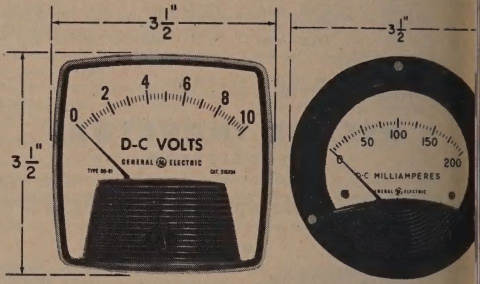
Snap-on, snap-off covers are supplied on all 4½-in. BIG LOOK panel meters. Covers can be easily removed and replaced while meter remains in normal mounted position.

Electroluminescent Scale Plate

For illuminated instrument applications, an electrolu nescent scale plate is now available for all 4½-inch a-c d-c Big Look panel meters. Excited by a-c voltage, they a soft, even, green light over entire surface of scale plat

Mirror-backed Scale

Also available on the 4½-inch meter exclusively mirror-backed scales (with knife-edge pointers, if desi for more precise, antiparallax reading.



As this size comparison shows, the new design appears to look n bigger, but will actually fit into the same usable panel space as o style meter.

D-C PANEL METERS

Shelf-shielded D-C Mechanism

re-magnet mechanisms with inherent shielding are used for all d-c ratings. permits mounting on magnetic or magnetic panels without special calion and cluster-mounting bezel-to-without interaction.

lf-shielding also minimizes effects of magnetic fields. Weight is reduced, too. Because of these important added values, the core-magnetic mechanism has gained industry-wide acceptance. (General Electric pioneered in the development of the core-magnet mechanism.) The superior operating characteristics of BIG LOOK meters—excellent damping, a high torque-to-weight ratio and minimum burden—are the result of continuous progress in development and use of high-quality, modern materials.

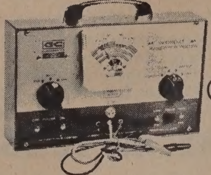
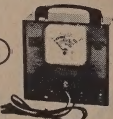
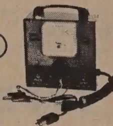
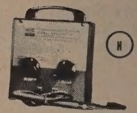
SIGNAL OPTIMIZER









(A) COMPONENT SELECTOR—Instant component substitution of 45 different Resistors, Capacitors and Electrolytics. Eliminates wasted time hunting for parts, determines the value of illegible capacitors and ends soldering mess created by individual substitution. Portable, compact design, first quality, full discharge protection. Completely self-contained in Scotch Grain finish Metal case with High Visibility recessed panel in two tone.

Cat. No. 36-524 .... Net **$24.95**

(B) TRANSISTOR RADIO TROUBLE SHOOTER—Indispensible and time saving . . . Tests PNP, NPN, Power Transistors, diodes and rectifiers (semi-conductors), all transistors; operates as a SIGNAL GENERATOR of 400 CPS (approx.) audio signal; also acts as a POWER SUPPLY — BATTERY ELIMINATOR. GC's Trouble Shooter gives an indirect battery test through substitution.

VOLT METER-MILLIAMMETER measures both external DC voltage 0-24 and milliammeters 0-100 without use of power supply. The wide angle meter (90% — 5 scales) and 8 position selector switch to give simple operation but accurate and dependable.

Cat. No. 36-568 .... Net **$49.50**

(C) PORTABLE TUBE TESTER & CRT REACTIVATOR — TESTS OVER 1750 TUBES — Test all tubes including Compactrons, Nuvisors, Ten-Pin Sylvania, Novars, Foreign Tubes, Hybrid Auto Radio Tubes, some Industrial Tubes — and as an extra feature, will test and reactivate CRT Tubes. Over 1,750 tubes. Only four knobs to set, the Checker does the rest. Tests black and white and all color Receiving Tubes. Six sockets eliminate search problems. Allows for feature tubes (including Color). Selenium Rectifiers can be tested and provides "Grid to Cathode" and "Filament to Cathode". Short Tests, spots "Gassy" Tubes. Grid emission shown on meter inter-element leakage sensitivity can be adjusted to suit individual serviceman.

(E) IN AND OUT OF CIRCUIT TRANSISTOR TESTER —Test all common NPN, PNP transistors and provide an indication of collector to emitter shorts, collector to base shorts, the condition of the collector junction and the DC current gain. Indicates the condition of diodes and rectifiers. Provides an "In-Circuit" test to determine the transistor's ability to oscillate as a blocking oscillator. This test is often most expedient in isolating troubles — The in-circuit check is not a gain test but only indicate whether or not the transistor is operative.

Cat. No. 36-570 ....Net **$24.95**

(F) TRANSISTOR TESTER—Tests PNP, NPN, power transistors, diodes and Rectifiers (Semi-conductors). The Tester's basic measurement capacities are Open Test, Short Test, Leakage — ICO, Gain — BETA, In-Circuit, Out-of-Circuit. GC's Tester operates on 2 penlite batteries. Wide angle meter with zero adjustment registers Shorts, Leakage and Gain. On/Off switch eliminates possible battery and/or Meter damage through accidental shorts.

Clear Plastic Styrene Cases

HOYT moving-coil Meters are built on the D'Arsonval principle using carefully selected jewel bearings and polished steel pivots. Accuracy within 2%. Alnico Magnets with soft-iron pole-pieces of uniform flux density used in all movements. Permanently correct balance assured by HOYT "cross arm" spiral wire balance. High torque to weight ratio. Quick response and good damping under all conditions. Choice of "knife-edge" or "lance" type pointers. Full 100° movements standard on most models.

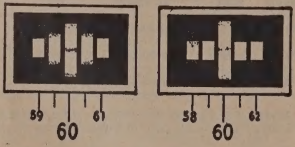
J-B-T INSTRUMENTS, INC., NEW HAVEN 8, CONN.

VIBRATING REED FREQUENCY METERS (PATENTED)

• USES — J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, and television service, on engine generator sets, in laboratories, in many types of electronic equipment, on panel and control boards, in inspection set-ups—wherever constant or known frequency is important to efficient operation of equipment. More than 20 years of continuous experience covering many thousands of these instruments are your assurance of quality for both commercial and defense applications.

• OPERATING PRINCIPLE — The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. Each reed is adjusted to respond by resonance to but one frequency. As the current excites the driving coil, the reed "in tune" with the frequency in the coil will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. To determine frequency, simply read the reed.

• RESPONSE PATTERNS — These patterns differ with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right. In general, the lower the frequency the greater the amplitude, the higher the frequency the less the amplitude. Thus a 12 cycle reed normally will have substantially greater amplitude than a 1000 cycle reed.



• ADVANTAGES — Guaranteed accuracy at reference temperatures of 77°F is ±0.3% or better of the AC frequency being measured, unless otherwise stated. Accuracy on interrupted DC may be somewhat less. High fatique safety factor for continuous operation. Temperature compensations are not required as temperature coefficient of reeds is only approximately 75 parts per million per degree F., negative.

• STABILITY — All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Wave form or external fields do not ordinarily have an adverse effect. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.

• TRUST THE METER — If a meter plugged in on a 60-cycle AC power line does not indicate exactly 60 cycles, trust the meter! Power supply may momentarily be off-frequency due to changing load conditions. All J-B-T Frequency Meters are meticulously calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standards frequency signals.

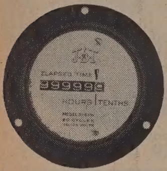
ELAPSED TIME METERS; FREQUENCY-TIME METERS; REED RELAYS AND OSCILLATOR CONTROLS

• USES AND ADVANTAGES OF ELAPSED (OR RUNNING) TIME METERS

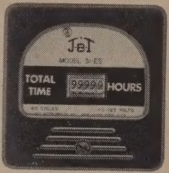
To record operating time of AC electrical and electronic equipment, these self-starting synchronous instruments normally register in 1/10th hour steps to 9,999.9 or 99,999.9 hours, then automatically reset. They are widely used for tube life, TV equipment, punch presses, conveyors, oil burners, ground support equipment, maintenance schedules, etc. J-B-T engineers recommend the AC type of elapsed time meter for superior accuracy, especially where voltage or ambient temperature vary widely.

New WIDE-NUMERAL ELAPSED TIME METERS



MODEL 31-EXW. The latest J-B-T elapsed time meter is Model 31-EXW, illustrated. Easily-read, wide 6-digit numerals register to 99,999.9 hours then automatically reset. Distinctive contemporary dial shows tenths in black on white, and units in white on black. The 3½" black molded case is interchangeable with Model 31-EX and FX types of frequency meters. Print SK-125 gives mounting information.

Model 31-EXW, 6-digits, 0-99,999.9 hours, 60 cy., 110-125 volts. **$16.95**



MODEL 31-ES. A square black molded case, matching other 3" x 3" meters, differentiates this model from the round 31-EX. Ask for Print SK-110, Rev. F showing standard rear mounting 2¼" bet. centers of molded-in studs, new rugged case with overall depth 3-11/32" behind flange, and electrical studs on center line. Variations can be made for 99,999 hours (suffix U), 230 volts, minutes, matte finish, or 50 cycles.

31-ES, 60 cy., 110-125 volts, 0-9,999.9 hours. **$17.05**

ELAPSED TIME METERS — Tenths of Minutes

MODEL 31-EXM, 60 cycles, 110-125 volts, reading 0-9,999.9 **minutes;** for short-run applications or readings at closer intervals than 31-EX. Tenths of minutes in red on white, minutes in white on black numerals, otherwise identical with 31-EX **$16.25**

MODEL 31-EHXX. Where rugged requirements make a completely sealed elapsed time meter desirable, this glass-to-metal construction with flat glass front and 3½" diameter separable flange, often is specified. Heavy-duty solder terminals are supplied. Every instrument is checked in a vacuum chamber. Overall dimensions and appearances match the FHXX series sealed frquency meters. Maximum voltage between terminals and case, 1,000 volts, R.M.S. The meter registers in 1/10 hour steps to 9,999.9 hours, then automatically resets. Tenths indicator is red on white, all others in white on black. Mount according to SK-85, Rev. C.

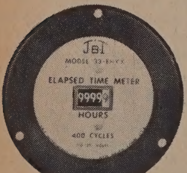
3½" SEALED ELAPSED TIME METERS — 400 Cycles



MODEL 33-EHXX. This stable, self-starting 400-cycle elapsed time meter is extensively used for preventive maintenance and for reliability testing and checking in a wide variety of equipment. The instrument is entirely enclosed in a 3½" flanged case, glass-to-metal sealed construction with separable flange; heavy-duty solder terminals; flat glass front. 1/10 hours are shown in red on white, all other numerals white on black. The external appearance matches FHXX frequency meter series. For dimensional details see SK-61, Rev. B.

2½" SEALED ELAPSED TIME METERS

MODEL 21-EHXX. A full size counter reading 9,999.9 hours in 1/10 hour steps and a rugged self-starting synchronous motor are built into this 2½" sealed meter. Its front mounting dimensions are the same as Type MR26 electrical indicating instruments in MIL-M-6B. Glass-to-metal seal makes the instrument completely tamper-proof. Ask for Print SK-68, Rev. G. ELAPSED TIME — FREQUENCY METERS

31-FE SERIES. To conserve panel space and centralize information, this panel instrument combines elapsed time or running time meter with frequency reeds. It is used on motor generator sets and on electrical equipment where maintenance routine calls for periodic servicing. The J-B-T design, proved by years of field experience, uses a separate exciting coil for the reeds to achieve close control of reed amplitude and frequency. Reads 0-9,999.9 hours, and 58-62 cycles with 5 reeds, for 100-130 volt operation; self starting. Tenths shown in red on white, all other numerals in white on black. Black metal case with front mounting per Table of Dimensions, line 6. Power c sumption is 4.7 watts. For variations having 7, 9, or 11 reeds, regularly stocked, such as Model 34-FE, see print SK-45. Rev. C.

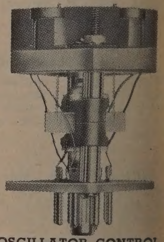
RESONANT — REED RELAYS AND OSCILLATOR CONTROLS

RELAY RR-A11A-124.0



OSCILLATOR CONTROL RO-B10B-188.0

J-B-T's many years of experience in the manufacture of resonant re products is being utilized to produce, on a custom basis, frequenc sensitive electro-mechanical control devices of **two types.** The **contc type** makes use of a resonant reed in conjunction with a highly reliab control system. Typical are Series RR-A- and RR-B-plug-in **relays** (som times known as decoders) which respond to a signal of predetermin frequency in the range of 50 to 1000 cps. **Oscillator controls** (sometim known as tone generators or encoders) are made in octal and 7-pro plug-in types, double or single reeds, in frequencies corresponding the relays. Typical in Series RO-B-, of which a 188.0 cycle cut-away mo el is illustrated. For further information, see Bulletin 162R. The **contactle type** is a new, patented device evolved from combining resonant re and photoelectric principles. The reed acts as a shutter in the light bea from light source to a photo-sensor. APPLIANCE TEMPERATURE TESTERS AND ACCESSORIES LABORATORY TEMPERATURE INDICATORS; ACCESSORIES

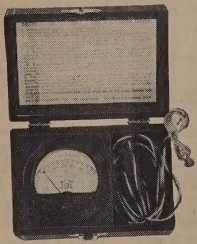
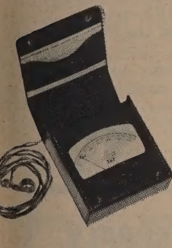
OVEN TESTERS

MODEL 23-JP-1. This popular portable indicating pyrometer saves time and furnishes reliable information in testing and setting thermostats on electric or gas ranges and other appliances by showing oven temperatures as they change. Standard size dial, 0-650°F., with 2⅜" scale arc reading, is used but covered by clear-plastic instrument front. The indicator is mounted on a black metal panel affixed inside a pocket-sized, black top-grain leather case 4½" x 2⅞" x 4¼" over hardware. Characteristic of more expensive pyrometers, the 23-JP-1 is automatically compen-
d for ambient temperature. Thus the
r eliminates calculations, avoids likeli-
d of serious error as temperature
nges inside the instrument itself, and
s foolproof direct readings. Supplied
attached SA-116, 5½' calibrated ther-
ouple, clip, and convection shield **$26.00**

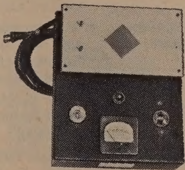


DEL 32-JP-3. This time-tested model uses
gid outer carrying case 6" x 3⅞" x 3¾",
ered in black leatherette. The glass-
ered indicator shows 0-650°F. range in
divisions readable to 2½° on a 2⅜"
e arc. Exceptionally fast, continuous
onse. Automatic compensation for am-
t temperature is a valuable feature
ther the tester is used for service work,
s demonstrations, or inspection. At-
ed SA-116, 5½' thermocouple, clip for
ching to grill and convection shield
uded **$28.00**



NEWEST MODEL 32-JP-7. Most versatile, and easiest to read of J-B-T oven temperature testers, Model 32-JP-7 offers a 650°F scale more than 4" long. Automatic compensation for ambient temperature change is included, so that temperatures are read directly and without calculations. The 32-JP-7 also provides color-coded external binding posts. These permit quick attachment or interchanging of various J-B-T theromcouples placed in one or more of the heat zones to be checked. An SA-116 5½' thermocouple with attachment clip, convection shield is supplied and is left attached when the tester is carried. For maximum usefulness in checking irons, washers, toasters, clothes dryers, etc., appropriate accessory thermocouples are suggested. Tester price includes stitched Ever-ready case, 5" wide x 5½" high x 2¾" deep, of sturdy, scuff resistant black vinyl. **$29.50**

IRON TESTER



DEL 32-JIT. Self-contained bench-type
ter; checks all makes of irons; measures
rmostat temperatures; shows open or
rt circuits. Automatically compensated
room temperature. Also indicates oper-
ng temperature of the sole plate (work-
surface) on non-electric or cordless
ns. Black metal base; overall size 10" x
x 5½", scale 0-650°F, 15 amp fuse, 6'
d, 110 volt, 50-60 cycles. **$34.50**

Simpson VU meters meet all the Electrical and Ballistic specifications established by Bell Laboratories and American Standards Association as required by broadcasting, communication and sound engineers. They are available with either type A or B scales. Type A scale stresses the level in VU for monitoring wire lines. Type B scale stresses per cent use of transmitter output and is the standard for broadcast service.

4½" METER RELAY — FRONT ADJUSTABLE — MODEL 29XA

General: Model 29XA Relays are of the D'Árson-val Type. Externally adjusted limit setting contacts are non-locking and intended for circuits with external locking provisions or for light duty non-locking applications.

Calibration: Accuracies ±2% of full scale.

Contacts: Platinum Alloy. For use @ 15 volts DC @ 10 milliamperes maximum on resistive or diode protected inductive loads.

Contact Adjustment: Contacts are externally adjustable over 95° of 100° scale arc, and within 5° of each other. The pointer will indicate the contact make position within 2° of actual contact intercept.

Contact Differential: Normally, contacts will cl within 2% of full scale value and break wit 10% of full scale value.

Insulation: Breakdown 300 volts AC from Re contacts to meter circuit. 3 KV AC from Re terminals to mounting panel. (All Tests at cycles.)

RUGGEDIZED INSTRUMENTS

A complete line of 2½″ and 3½″ ruggedized and sealed instruments designed to meet government specification MIL-M-10304A.

Triplett ruggedized instruments employ the unique and exclusive bar-ring construction so well adapted to ruggedization, that the addition of spring loaded jewels and an internal rubber mount (both designed for jewel protection) constitute the essential difference between the commercial and ruggedized movements.

The bar-ring construction is inherently self-shielding so that the heavy steel case does not affect instrument calibration nor does mounting in a steel panel of any thickness.

The unusually strong housing consists of a drawn steel case with heavy die cast window bezel. The bezel seals the window to the case with a simple gasket and screws. A tough plastic window is used instead of glass.

Husky gasket-sealed studs are used for electrical connections to provide additional protection over delicate glass sealed types.

Most catalog ranges of DC: MV, Volts, Mic. Ma, Amp and AC rectifier type can be supplied. Regular dials in accordance with MIL-M-10304A are supplied although special dials of all descriptions can be made up for special applications.

MINIATURE EDGEWISE PANEL INSTRUMENTS

If space on your panel is at a premium here is a miniature meter that will fit into even the most restricted area—yet give you the readability, performance and reliability you expect from the conventional 2½″ sizes.

Weighing only four ounces this meter also is of value to the user who has a weight limitation factor on his hands.

Accuracy—DC 2% of full scale; AC Rectifier type 5% of full scale.

Self-Shielded Bar-Ring Magnet—Not affected by magnetic panels. High torque, exceedingly rugged and accurate.

Mounting—Horizontal, zero at left and barrel down is standard.

Vertical mounting or other special adaptations in quantity orders.

Panel Hole Required—Only ⁹⁄₁₆″ x 1¹¹⁄₁₆″.

.001 TO 1020 V-D.C.

RESOLUTION 0.05%

PORTABLE (7 lbs.)

FLOATING OR GROUNDED INPUT

COMPLETELY TRANSISTORIZED - RELIABLE

LOW COST Outstanding performance is provided in a low cost instrument providing digital readout. Small (5½" x 7" x 8") and weighing only 7 lbs., unit is conveniently designed for either lab or production use.

RESOLUTION and REPEATABILITY The warranted accuracy is 2 digits for all ranges. This covers all thermal effects and reference circuit errors. The instrument can be easily read and is sensitive to small voltage changes. For short term observation, under stabilized ambient conditions, unit will repeat to ½ digit or .05%. Thus, for many applications, the instrument can be used to a comparative accuracy of .05%.

READABILITY Presentation is readable upon application of slowly changing voltages. Thus, input voltage drift can be continuously observed.

READING SPEED Instrument comes to reading balance quickly and without annoying creep. Average reading time is 2 seconds. Numerals are illuminated.

CALIBRATION EASE High input impedance permits direct calibration from a standard cell. Under normal usage, recalibration is required only at 6 month intervals.

RELIABILITY High reliability is achieved by a completely transistorized amplifier and the absence of stepping switches and relays. Normal overloads or incorrect polarity will not damage instrument.

LOW POWER CONSUMPTION The efficient circuit requires only 28 watts maximum, thus minimizing heat rise and attending problems.

OTHER USES By use of compatible DC transducers, the Digitec® 200 can be used to display readings of current, pressure, speed, position, flow, angle or any parameter.

READING RETENTION A jack is available on the rear of the case to permit holding of a displayed voltage by means of an external switch. Suitable switches complete with cord and plug are available as optional accessories.

CARRYING HANDLE A convenient carrying handle also serves as a means for setting the viewing angle for optimum readability.

WESTON INSTRUMENTS

1900 PANEL INSTRUMENT SERIES

GENERAL

The 1900 Series is an integrated line of a-c and d-c panel instruments, providing a carefully selected choice of sizes, case styles, accuracies, pointers, scales and ranges. Particular attention has been paid to designing instruments that will present an overall appearance of harmony, even when random sizes are mounted side by side. Mounting bezels provide three types of mounting—recess, flush and conventional.

One of the many features of this new Weston series is the method of construction which provides quick interchangeability of fronts and easy access for adjustment or service, if ever required. From their spring-backed jewels to their unique fastening clips, the 1900 Series incorporate the fine workmanship and quality that has always been associated with Weston.

NEW FROM BIRNBACH INSULATED *GLAS-LINE* CABLE

Provides complete isolation of any antenna syst where support must be obtained from metallic obje such as towers, windmills, etc.

NON-INDUCTIVE • NON-CONDUCTING • NON-ABSORBI • NO SAG • NO ROT • NO SHRINK • FLEXIBLE USE FOR DIRECTIONAL ARRAYS, BEAMS, RHOMBIC S TEMS, ETC.

This Birnbach non-metallic guy wire is not to be handled as regu wire. Do not twist around itself for solid joint; it must be knotted fir in place (use bow line knot) — use coupling devices such as our N 472, 473 or 474 insulators. Must not be abraided by constant friction will wear and break line; avoid tight turns. An open thimble should used to couple the Birnbach "Glas-Line" cable to an eye-bolt at mast tree. Glass fibers conform to Mil 1140 Spec. and plastic jacket confor to Mil-I-631C Spec.

*The breaking strength indicated is applicable when "Glas-Line" cable properly used.

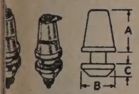
Birnbach FEEDTHRU • STEATITE PILLARS • CORRUGATED CERAMIC • STANDOFF INSULATORS

BIRNBACH FEEDTHRU INSULATORS



Made of highly vitrified, low absorption porcelain smoothly glazed to prevent accumulation of dust or dirt. Maximum strength is achieved by the proper proportions and flat mounting surfaces. Long insulating sleeves on the lower part of the insulator contribute much to their performance on high voltages. Brass nickel plated hardware.

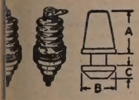
CORRUGATED FEEDTHRU INSULATORS



The six new corrugated type feedthru insulators have more than twice the leakage path of the straight type because of increased surface of the corrugations and recommends itself where a straight side insulator of equal height is not satisfactory because of its shorter leakage path. Brass nickel plated hardware and cork mounting washers supplied.

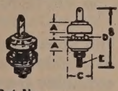
STEATITE BUTTONS



This specially designed Steatite button is intended for use to simplify wiring and to be used as a binding post or a binding post insulator. Attention is called to the uniqueness of the design which prevents either section of the insulator from turning in respect to the special screw. The specially designed screw locks both sections.

"LUCITE" FEEDTHRU INSULATORS

These feedthru insulators are ideal for bringing high frequency leads thru a panel. They are made of genuine Dupont Lucite. Because of its low loss at high frequency, it is well adapted to insulated elements of high frequency circuits. The ½" dia. insulators have brass nickel plated 6-32 hardware and the ¾" dia. insulators, 10-32 hardware.

BIRNBACH LEADIN INSULATORS

BIRNBACH
BIRNBACH

Each cone is 2¾" high and made of low absorption, highly vitrified glazed porcelain. The Nos. 4237 and 4238 Leadin Insulators have sufficient insulating bushings to insulate the rod that goes through the wall. In addition, 2 bushings are included, ¼" and ½" long, allowing complete insulation of the threaded rod of any length in multiples of ¼". They come complete with brass nickel plated hardware and lead and cork washers to permit a water-tight seal.

POLYSTYRENE ROD — TUBING — SHEET

For radio and electronic applications, because of its very low loss factor at ultra high frequencies, Polystyrene is the ideal material for insulators, coil forms, shields, etc. It has excellent arc resistance, is non-tracking and has splendid insulating properties. Because its water absorption is practically zero it has excellent dimensional stability.

SLO-SYN® *Synchronous Motors*

- **INSTANT STARTING, STOPPING, REVERSING**
- **72 RPM SHAFT SPEED WITHOUT GEARS**
- **CAN BE USED AS D-C STEPPING MOTORS**

A SLO-SYN Synchronous Motor is a permanent magnet type a-c motor having instant start, stop and reverse characteristics and a basic shaft speed of 72 RPM with 60 cycles applied. Adaptable for use as a d-c stepping motor or incremental positioning device that can be stepped 200 times per revolution of the motor shaft. Compact and economical, has almost negligible overshoot, no ratchets or detents. A single-pole, three-position switch can give complete forward, reverse "off" control because the motor has three leads only. St or stops in less than 0.025 second or approximately 1.5 cy No need for mechanical or electrical braking; stops in than 5° of motor shaft rotation. Starting and operating rents are nearly identical; no excessive inrush current w motor is turned on. All types have lubricated-for-life beari

PLANETARY GEAR TYPES

Standard types having specially-designed planetary gear assemblies are available. The speed reduction assembly is completely enclosed in a dust proof housing mounted on the shaft end of the motor. The load is evenly distributed over three nylon gears thereby reducing the possibility of tooth damage. The self-lubricated nylon gears provide quiet operation and long life. The planetary gear shaft is ball bearing mounted. When ordering, the basic type number must be suffixed with the desired planetary gear assembly number. For example, type SS50-P1.

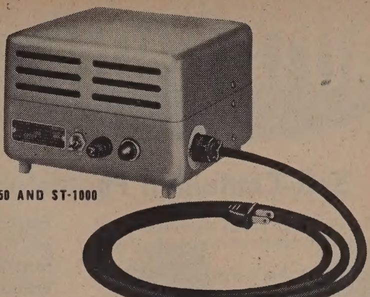
SLO-SYN® *Translators*

A SLO-SYN Translator is a pulse-to-step converter intended f use with appropriate bifilar type SLO-SYN Synchronous M tors. It converts low-level signal pulses or square waves into t correct switching sequence needed to drive the SLO-SYN m tor at 200 discrete steps per revolution. Internal power supply a ws alternate operation from an external shorting switch if d ired. Power input is 120 volts a-c, 0.5 ampere for type S-250 and 120 volts a-c, 1.0 ampere for type ST-1000. SLO-SN Translators are used in programmed positioning, remote p itioning, indexing and indicating operations.



TYPES ST-250 AND ST-1000

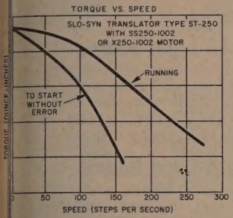


FIGURE 1

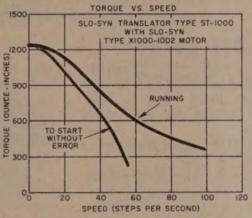

FIGURE 2

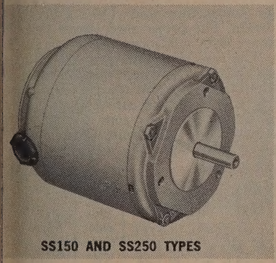
Torque vs. speed characteristics for a SLO-SYN Translator type ST-250 are as shown in Figure 1 when used with a type SS250-1002 or type X250-1002 motor. SLO-SYN Translator type ST-250 can also be used with a type SS150-1010 motor or, for higher stepping rates, with a type SS50-1009 motor and a 2 ohm, 25 watt dropping resistor. Figure 2 shows the torque vs. speed characteristics for a SLO-SYN Translator type ST-1000 when operated with a type X1000-1002 SLO-SYN motor. For higher stepping rates, SLO-SYN Translator type ST-1000 can be used with a type SS400-1002, type SS250-1027 or type X250-1003 motor and a 1 ohm, 50 watt dropping resistor.

Bifilar and Four-Lead SLO-SYN® *Synchronous Motors*



SS150 AND SS250 TYPES

BIFILAR SLO-SYN Synchronous Motors are used for d-c stepping applications where the use of push-pull circuitry and a center-tapped power supply is not possible or where increased torque at high stepping speeds is required.

AUTOTRON Photoelectric Controls

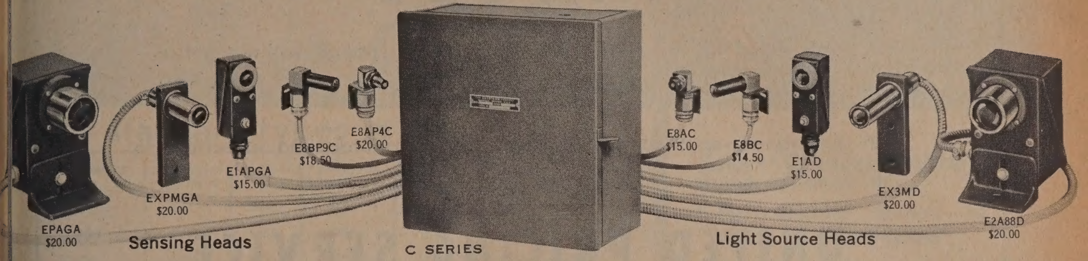
C-Series Impulse Actuated Photoelectric Timing Controls



C Series Controls are triggered (ENERGIZED) by electric impulses. De-Energizing is controlled by adjustable time delay—the relay remains energized through the timing period for which the control is set. DARK-energized Controls time out with LIGHT; LIGHT-energized Controls time out with DARK.

When the "ENERGIZING" light change occurs *before the timing period expires* the relay remains energized through another complete timing period.

Quick "Light Change" is required. Objects should travel at near 60 feet per minute (unless specified). Timing repeat accuracy, 1%. Power consumption, 20 watts.

Plate Relay: SPDT contacts rated 15 ampere at 115 VAC, non-inductive load.

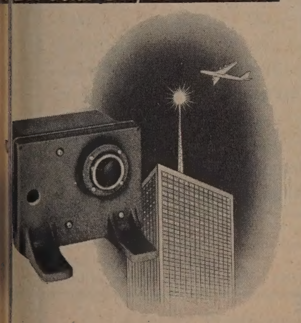
BX Solar ON/OFF Control



matically turns lights "ON" at preset value—and turns lights "OFF" when exceeds preset value.

T Control Relay energizes when light eds intensity for which control is set; ergizes when light falls below the t level.

se of tube failure the relay de-ener-; providing same control action as light falls below preset level.

Time Delays prevent operation by r momentary light flashes or shadows. ern, simple circuitry uses one rugged, ium type power tube. Light intensity stment from outside of housing. Gas-ealed cast aluminum housing, tapped ½" conduit. For 115/230 v, 50-60 c. lable with three adjustment ranges:

2BX-.2; 1 to 5 fc for street lighting, parking lots
2BX-.5; 15 to 50 fc for signs, parking lots
2BX-1; 20 to 150 fc for obstruction or tower lights

DEL 9000 SERIES This is the Worner Master Control System. It con-
f the Model 9000-S Master Control Panel which supervises 1, 2, 3 or 4 Foto-
Sets of Model No. 9000 series shown. Each Fotolectric Set consists of Exciter
and Photo-cell Receiver chosen in pairs for distance to be covered. Fotolectric
re located for detection. Control Panel remotely installed, contains Relays which
ze alarm circuits.

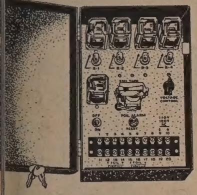

Illustration shows four Relay units plugged in to show plug-in location for 1, 2, 3 or 4 Relays as needed. Model 9000-S Master Control Panel is priced "less Relays". One Relay unit is automatically supplied with each Model No. 9000 series Fotoelectric Set ordered.

SIZE: 7" wide, 10¼" hi., 4⅜" dp.

DEL 9000-S MASTER CONTROL PANEL supervises up to
Fotolectric Sets. On a separate circuit, it will also supervise foil tape,
traps and window switch systems. Both circuits operate independently and
taneously. Sounds continuous alarm (until reset) when either of these
ion circuits is opened or wiring of Fotolectric system is tampered with.

FOTOLECTRIC FIRE PROTECTION

SMOKE DETECTION For institutions, schools, hospitals, hotels, etc., where fire originating in or drawn into ventilating or air conditioning ducts are fan driven to a succession of uncontrollable outbreaks throughout building. The Worner Fan Motor Stop installed on air duct minimizes this hazard by early detection, automatic stopping of fan and signaling of alarm. Meets requirements of National Board of Fire Underwriters and listed by Underwriters Laboratories. Write for Bulletin 650.

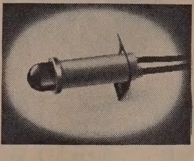
OMNI-GLOW PILOT LIGHT



For use on instrument panels, appliances, switchboards, all electrical and electronic apparatus, OMNI-GLOW will last in excess of 10,000 to 25,000 hours of operating life.

With built-in glow lamp and current limiting resistor, all mechanical spring contacts are eliminated, providing a cost-saving, rugged unit relatively free from failure due to vibration or shock.

Easy mounting — only a ½" hole required for any panel thickness. Instant fastening — speed nut assures permanent shock and vibration-proof attachment.

Drawing less than 1/10 watt at 115 volts, long life, high reliability operation is provided over the 75-150 volt range; can also be used at higher voltage with decreased life.

Nylon body and acrylic lens assembly is 1 15/16" long overall. Lens extends 17/32" in front of panel. Black plastic (105°C) leads are 4½" long, stripped and tinned ½".

Four standard models have red (Model #1010A1), clear (Model #1010A2), amber (Model #1010A3), or white translucent (Model #1010A4) lenses.

Furnished complete with lamp and speed nut, OMNI-GLOW is UL approved—CSA Approval No. 13346.

SAFE-T-KLIP

(U. S. Patent 2,754,490)

New convenience and safety are realized through the use of 100% insulation on these test clips. Tough nylon insulation covers the entire clip, including the nose, without the bulkiness of rubber boots or insulating tape. Danger of short circuit due to clips touching each other or other components is eliminated, and test leads may be changed from one connection to another without cutting the power in the equipment.

Available in pairs (one red, one black) SAFE-T-KLIP incorporates a cadmium plated steel alligator clip and provides shock-proof, short-circuit proof operation in excess of 600 volts. Width of the clips is ⅜"; maximum height is ⅝".

Four models are available. The #1410A is for use with a wire lead and provides either a soldered or screw terminal connection. The nylon sleeve is threaded to the clip for easy connection: Overall assembled length is 2 13/16". The #1410B, with overall length of 2 11/32", provides positive clip connection to all standard (.081 dia.) phone-tip test prods. The #1410C has a jack for standard banana plugs and an overall length of 2 1/16".

The 1410D is similar to 1410B except that the entrance hole is modified for Signal Corps. application.

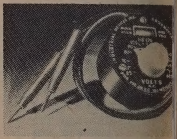
MINI-VOLT VOLTMETER

(U.S. Pat. 2,644,134)



MINI-VOLT is an "abuse-proof" voltmeter, sufficiently accurate to indicate a 2 or 3 volt drop on 110 volt line. Virtually burn-out proof, this rugged unit is used by electricians, radio and TV repairmen, refrigeratior and air conditioning servicemen, experimentors, lab technicians, handymen.

MINI-VOLT has wide application for all equipment whose proper operat
requires correct voltage.

In addition to measuring the exact voltage over the range from 65 to
volts, Model #400B is used to identify AC or DC lines, check rectifiers, fil
capacitors, chokes; test for blown fuses, grounded components, DC polar
measure voltage drops with load, and 1001 other uses.

For use on AC (any frequency) or DC, MINI-VOLT, with an impedance of
proximately ½ megohm, draws negligible current and can therefore prov
dependable voltage readings even on circuits used in electronic apparatus.

Will provide a lifetime of service — glow lamp is guaranteed for 25,000 ho
of actual operation. Furnished complete with extra-heavy insulated 12-in
flexible test leads and test prods.

Lightweight impact resistant case and dial panel, thoroughly insulated.
rugged that instrument can be thrown into tool box or dropped to floor with
damage C.S A. approval #8910.

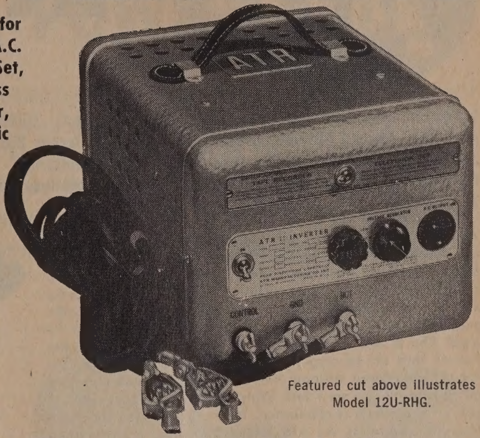
UNIVERSAL INVERTERS

Specially Designed for Operating Standard A.C. Tape Recorder, Television Set, Dictating Machine, Radio Set, Ham Gear, Public Address System, Amplifier, Record Player, Electric Razor, Food Mixer, Vacuum Cleaner, Sewing Machine, Business Machine, Electric Drill, Fluorescent and Incandescent Lamp, and Electronic Test Equipment from D.C. Voltages in Automobiles, Buses, Trucks, Boats, Trains, Planes, and D.C. Districts. Ideal for Emergency Lighting Applications for Civil Defense, Red Cross, Rescue Work, etc., Simply Using Extension Cords.

ATR Universal Inverters are actually a combination of 4 Inverter designs in one unit! These Inverters are especially recommended for applications as mentioned above and feature complete RF frequency interference suppression, instant starting, frequency stability, and built-in power factor corrector utilizing a simple toggle switch. With ATR Inverters, the need for special equipment is eliminated. They are designed for quiet, long-life operation at high efficiency and maximum reliability. All models indicated are equipped with ATR heavy duty plug-in Inverter Vibrators. These Inverters also come equipped with four-point voltage regulator which make possible the correct output voltage for minimum to maximum loads and also help compensate for input voltages which are lower or higher than normal. The operating efficiency is in excess of 75%. To figure approximate current consumption from storage battery, divide the rated input wattage of the recorder (or load) being operated by the storage battery voltage and further divide this answer by .75 which will give the actual current consumption based on the actual load and efficiency. The battery current consumption required for a tape recorder is normally less than that drawn by ordinary automobile headlight(s). These Universal Inverters are recommended only for use with loads having power factors in excess of 70%.



Featured cut above illustrates Model 12U-RHG.

ATR Inverters should be used only for the applications as outlined.

These Inverters also come equipped with four-point voltage regulators which make possible the correct output voltage for the power load being protected. These Inverters are recommended for use only with loads having power factors in excess of 70%. Additional external power factor correction is required in order to operate lower power factor loads as low as 50%.

The ATR Charger portion is completely automatic and will maintain the storage battery at full charge, with minimum gassing, from regular 115-volt AC 60 cycle power line. In the event of power line failure, the storage battery, which has been kept fully charged for this purpose from the regular power line, is connected automatically to the lamps, or to the Inverter, or both. The Inverter then supplies power automatically to the load being protected. When the commercial power is restored, the transfer unit automatically switches the "protected load" to commercial power and turns the Inverter and lights off. At this point, depending on the state of charge of the battery, the battery charger will deliver approximately 6-3 amperes to a 6-volt battery (or less to a 12-volt battery) for fast recharging. As soon as battery reaches full charge, the charger will automatically switch to a trickle charge of 100-150 milliamperes (adjustable) to maintain this full charge.

OBSOLETE TYPES

It is entirely impractical to continue to stock the hundreds of different heavy-duty vibrators that have been supplied in past years for a large variety of uses. Every attempt is made to maintain equipment in service, even though it originally used vibrators which have generally become obsolete. Some obsolete vibrator types are still carried in limited stock at the factory. In a great many cases, simple instructions are available so that a radio technician can change wiring, sockets, or other minor features in an old design to adapt it for use with new standard vibrators.

For information regarding a possible replacement for obsolete vibrators, send details including model number of equipment, original vibrator type number, voltage and frequency to the CDR Vibrator Department, Fuquay Springs, N. C.

MALLORY
VIBRATOR
FOR USE ON
6 VOLT BATTERY

Mallory Vibrators are assembled from carefully matched materials built to extremely close tolerances, assuring perfect balance and precise operation. Crude rubber insulation and heavy cans effectively deaden sound and vibration. Every Mallory vibrator is tested for output, starting voltage and wave form. If Mallory type number is not known refer to diagram above or write for **VIBRATOR GUIDE, 15c** FREE when request is included with order for Mallory Vibrators.

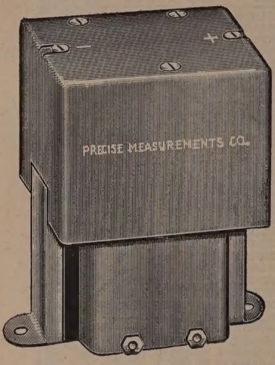
ROCK TOP

PACKAGED POWER SUPPLIES



PRECISE MEASUREMENTS CO.

Snap-Together, Packaged Power Supplies with new patent applied for features. Consists of a molded basic transformer which has undergone rigid tests for insulation and power handling capacity; plus a ROCK TOP head containing the rectifier and filter section. This simple fool-proof construction results in longest possible life with minimum space requirements. Should repair ever be required, simply discard either the top or bottom section and replace with new element. In a matter of minutes, full operation is restored. The Filtered D.C. Output Voltage may be varied from zero to full rated voltage by adjustment of input AC level with a rheostat or Variac. Output is completely isolated and either side may be grounded. New Mirror Scale Instrument Illustrated

One of the most popular power supplies on the market. Completely redesigned for greater ruggedness and convenience of operation. Widely used for powering electronic equipment and for routine breakdown and insulation testing. Output voltage is well filtered D.C. which is adjustable with convenient front panel control. Input is 115 Volt, 60 cycle A.C. Larger 6″ precision 1% mirror scale movement available on order. Regulated models offer closely stabilized output voltage regardless of line or load changes.

Model	Max. Voltage	Regulated 100 Microamps	Unregulated 1 MA.	Unregulated 5 MA.
6000-1	1,000		$150.00	$200.00

6025	25,000	205.00	275.00	350.00

Note. Regulated power supplies are of the radio frequency type and adjust from approximately 20% to full rated voltage. The 1 and 5 milliampere types are transformer operated and have a range of zero to full voltage output. These are recommended for industrial service applications.

Mirror Scale Higher Accuracy Meter. Recommended for more exact calibration or test purposes. Add $50.00 to any meter equipped power supply.

For additional built-in current meter (both meters are 3 inch size), including automatic meter protector circuit, add $50.00 to any power supply.

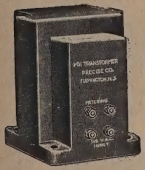
METERING TRANSFORMERS



MOLDED ROCK design. Used for insulation and breakdown testing, meter calibration and for elimination of static charges on plastics and paper. Primary windings for 0 to 115 Volts 60 cycles AC. Secondary provides high AC voltage in true RMS. One side of secondary brought out to a LOW POST. High side of secondary is sheathed in plastic deep well for maximum safety. A third winding with 1/100 ratio permits standard low voltage precision voltmeter to be used to indicate exact value of high voltage.

"V.T." VARIABLE TRANSFORMERS

Toroidal core type autotransformers providing distortion-free continuously adjustable voltage from fixed AC input. Highly advanced Ohmite design. Sizeable bonus in current available in all units where output greater than line volts ("overvoltage") is not required ("N" suffix); "LN" suffix indicates low input (36V max.) and very high current output; positive current transfer achieved with direct brush to slip spring shunt. **Mounting:** VT2 panel mounting by ⅜-32 bushing; VT2 tandem units by ¼-20 bolts; all VT4 and VT8 types panel or table mounting by ¼-20 bolts; VT20, VT20B, panel or table mounting by four ⅜" dia. bolts or three ⅜-24 bolts. Shafts of VT4, VT8, VT20 units slide to brush or base side. Units not cased except where indicated. Over-all dimensions include shaft. Suffixes "-2" and "-3" indicate number of units in tandem assembly (shipped with connection instructions).

[1] Frequency shown is a minimum—units may be used to well over 400 cps.

[2] VT8H and VT8HN also have taps for 120V input with 280V output for VT8H and 240V output for VT8HN. With use of 120V input the max. current rating applies up to 120V output but reduces to approx. 50% at max. output voltage. (Cat. 500)

[3] Connected at factory for overvoltage output—easily reconnected by user for no-overvoltage output. On VT8G, switch selects overvoltage or no-overvoltage.

* Add ⅞" for knob thickness.

† Add 1" for knob thickness.

[4] User wires for desired output. Dial normally calibrated for overvoltage.

[5] Tandem assemblies normally furnished without interconnection between units.

[6] When transformers are series connected, load cannot be grounded.

[7] Includes knob and dial.

[8] May be used at 50 cps if connected for no-overvoltage output.

[9] Overvoltage connection must not be used.

[10] Specify 240 volt dial if desired.
